MagneGrip™ high-efficiency fans

eliminate diesel emissions in firehouse

6/8/05

MagneGrip™ Exhaust Extraction Systems incorporate high-efficiency exhaust fans to completely eliminate toxic diesel exhaust fumes from firehouses. The systems capture and remove 100 percent of the soot and gases generated by diesel engine emissions.

High-efficiency fans are standard with all MagneGrip™ systems, including one of the largest capacity fan available industry-wide. This large-capacity fan is rated at 9,200 cfm at eight inches of static pressure.

The fans are also 50 percent quieter than conventional pressure blower fans. They have counterbalance features, enabling them to perform with less vibration and run quietly without silencers. The MagneGrip high-efficiency fans rank as one of the most environment-friendly, non-intrusive fans available for firehouse applications.

Your Total Solution for Exhaust Removal & Air Purification
